# 6-FOOT LIVE BOOM

BREAK-UNDER BOOM EXTENSION

The Live Boom attachment for XL 4000 Series II excavators enhances the legendary Gradall® boom versatility with the added ability to reach over obstacles and then down 6 feet. Equipped with a 60-inch ditching bucket, the Live Boom attachment's break-under motion lets the Gradall boom reach over railings, barriers and utilities; excavate side walls; and reach into trucks and rail cars for smooth loading and unloading. Utilizing the XL 4000 Series II models' 220 degree boom tilt, the Live Boom provides unique bucket access to hard-to-reach locations. Unlike conventional excavator booms that require considerable overhead clearance, the Gradall telescoping boom, equipped with a Live Boom, provides break-under working motion on low-overhead jobs under bridges, roofs and tree limbs. A Live Boom can be retrofitted to any Gradall XL 4000 Series II excavator using standard quick-connect hydraulics and quick change bucket adapter. XL 4000 Series II models are available with the industry's widest choice of undercarriages: a highway speed wheeled undercarriage, a wheeled undercarriage designed for mobility on and off paved surfaces and a rugged crawler.
